## Installing the best VoIP Systems in the industry.

**Technology** of tomorrow, today!

## What is VoIP?

VoIP (Voice over Internet Protocol) is an established technology that allows you to make and receive telephone calls over the internet. VoIP enables you to make inexpensive telephone calls over a broadband internet connection instead of using your regular telephone service. With VoIP, you can connect to regular telephone numbers locally, or in other parts of the US, or anywhere else in the world.

## More Features

From HD Voice to Outlook integration, you get more features included with every phone without the heavy fees and expense. Some of these standard calling features include fax & voicemail to Email, call transfer, call forwarding, call waiting, call conferencing, 3-way calling, find me/follow me, speed dial, caller id and many more. Advanced features like ACD (Automatic Call Distribution), integrated auto attendant, virtual receptionist, intelligent call routing, call queue management and more are included at no additional cost!
