

Installing the Technology of tomorrow, today!

Providing the best
Wireless Services
in the industry.

Fixed Point Wireless

With all of today's popular mobile wireless technologies, Fixed Point Wireless (FPW) solutions consisting of Point-to-Point, Point-to-Multi-Point, and Mesh topologies have emerged as an attractive alternative to traditional leased connections. The demand for cost effective metro or municipal connectivity is met with FPW options ranging from low-cost WiFi based systems to high-performance carrier-class infrastructure links.

High Capacity Wireless

We now have the ability to implement Gigabit speeds at distances up to 6 miles, while maintaining 99.9% uptime. These technologies often referred to as "wireless fiber" or "fiber alternatives" are a perfect fit for any organization looking to link facilities in industrial, metro, municipal, or campus environments regardless of business arena.

Cut Out The Recurring Fees

FPW provides a viable alternative to the recurring costs, implementation delays, construction challenges and easement issues often associated with traditional carrier-based leased connections. Based on common wireless networking hardware, this low-cost option utilizes WiFi technology to deliver connectivity within Point-to-Point, Point-to-Multi-Point, and Mesh topologies.
